one for chat window, other for chat-to-address list window. \* Support UTF-8 character encoding. \* No installation is required. \* Self-description: (XML(Self Description)) - The ordinary chat messages of AIM, MSN, ICQ, and Yahoo are supported. \* Chat messages can be sent to multiple chat-to-address book. \* Two main screen-windows are included, one for chat window, other for chat-to-address list window. \* Support UTF-8 character encoding. \* No installation is required. \* Self-description: (XML(Self Description)) - The ordinary chat messages of AIM, MSN, ICQ, and Yahoo are supported. \* Chat messages can be sent to multiple chat-to-address book. \* Two main screen-windows are included, one for chat window, other for chat-to-address list

- multi-thread chat tool - support any number of users - no registration needed - using mini-window to display chat history - do not need any administrator's access to get online - do not need Internet connection - use ability to display images, skins and large font characters - available in 8 languages

About Light Network Messenger: Lights is a piece of instant messenger that is very easy to use, user-friendly and cross-platform. Lights

Description: - multi-thread chat tool - support any number of users - no registration needed - using mini-window to display chat history - do not need any administrator's access to get online - do not need Internet connection - use ability to display images, skins and large font characters - available in 10 languages I have used the following code

---

to send message from an android to an iOS device without internet connection. It works!

```
Intent i = new Intent(); i.setAction("android.  
media.action.IMAGE_SEND");  
i.putExtra(Intent.EXTRA_STREAM,  
Uri.fromFile(pictureFile));  
i.putExtra(Intent.EXTRA_TEXT,"dummy");  
i.setType("image/jpeg");  
i.setData(Uri.fromFile(pictureFile));  
startActivity(Intent.createChooser(i,"Select  
File To Send"));
```

A: You're using `sendBroadcast()` which sends a message to all `ActivityManager` receivers. This is inappropriate for your problem. What you need is the package delivery mechanism. The code would be very similar to the following, except that you would deliver the notification to the package, not to the individual application. Encode the file as a MIME

---

attachment with the following: MIMEHeader  
header = new MIMEHeader("application",  
"octet-stream");  
header.addParam(MIMEHeader.NAME,  
"image/jpeg"); header.addParam(MIMEHeader.  
CONTENT\_TYPE, "image/jpeg");  
MimeBodyPart part = new MimeBodyPart();  
part.setText("dummy");  
part.addHeader("Content-Disposition",  
"attachment; filename=somefile.jpg"); part  
09e8f5149f
