In this article, we'll look at how to use the MSI Extract utility to remove unused data from a Windows installation. Data To start, there are a few ways to identify unused data. The first is to scan for empty folders or unused registry keys. The second is to look at user files and other data. The third is to use basic logic to try and guess at what is installed on your PC. The simplest way to remove unused data is to use the Disk Cleanup utility. Although it is not a good way to go, you can find the exact location of the files that you think are unused by checking the disk with a tool such as Norton Ghost or using an online backup service like those from Carbonite. Disk Cleanup Disk Cleanup is a good way to go about cleaning up unused data. It is usually used when the operating system has completed its initial install and the first time the user logs on. You can use Disk Cleanup to clear out temporary files, old logs, old temporary files, and other system information.
