## Windows Server 2008 R2 SP1 Standard Full Evaluation VHD

Microsoft Windows Server 2008 R2 is one of the most innovative and critically acclaimed server operating systems available on the market today. As a result of Windows Server 2008 R2's success, the 2008 edition is no longer receiving new feature updates and support. With that in mind, if you have a current installation of Windows Server 2008 R2 SP1, or you're looking to upgrade, you might be wondering if it makes sense to install Windows Server 2008 R2 SP1 Standard and support it for the foreseeable future, or perhaps it makes more sense to move to Windows Server 2012, Windows Server 2012 R2 or a Linux distribution instead. Windows Server 2008 R2 Standard provides a comprehensive environment for basic data center requirements while Windows Server 2012 Standard provides a more robust platform for production-grade servers. In this evaluation version of Windows Server 2008 R2 SP1 Standard, you will see how well it performs against the full edition of Windows Server 2008 R2. You can test it yourself by installing it on a compatible PC, booting from it, then using Windows Server 2008 R2 SP1 Standard in any of the roles you would typically see in a datacenter environment, including: Maintenance Window Server, Hyper-V Server, Security Group Manager, Domain Controller, DNS Server, Workstation Replication, Terminal Services User Session Manager, and even System Center Operations Manager. With Windows Server 2008 R2 SP1 Standard, you can easily test how well the features in the OS work in a live environment without having to worry about installing and configuring it on an actual PC.
