Examples of electro-optic materials that are useful for such applications include organic and inorganic materials that respond to an applied electric field. Examples of organic electro-optic materials include organic light emitting devices (OLEDs) that emit light when a current is passed through the device. Typical inorganic electro-optic materials include ferroelectrics, antiferroelectrics, and liquid crystals, which can be used for the electro-optic modulation of scattered, transmitted, or reflected light. Organic light-emitting devices (OLEDs) are used as electro-optic light sources. A 1d647c40b
