DXF format specification The DXF file format is a binary exchange format for CAD data. The DXF file format specification (hereafter DXF Specification) version 2 is the current specification. Previous specifications exist. The DXF file format is based on ASCII ASCII, a human-readable text format for binary content. As a result, DXF files are inherently human readable. DXF files are a common format used for exchanging documents. CAD models are also commonly exchanged via DXF, since this format is the native exchange format of most CAD systems. For example, many CAD packages export data to DXF files, such as the home-user products Revit, 3ds Max, Maya, etc. Other CAD packages, such as Autodesk Inventor, DGN, and Parasolid use the DXF format as the native file format for storing their output. These file formats include data such as part definitions, text, geometry and other object data. The DXF specification has been updated over time. This makes it difficult to track all changes and version numbers. The current DXF specification is specified in version 2.0. Changes in the DXF Specification The most significant changes made to the DXF Specification are as follows: DXF v2.0: the DXF specification was updated to version 2.0, which was released on April 3, 2011. New data types: DXF v2.0 introduced new data types to handle large text files

and structured data. These new data types were introduced to support future iterations of the DXF format specification. DXF v2.1: Introduced new data types: DXF v2.1 introduced new data types to support large geometry objects. DXF v2.1 introduced a new data type that allows grouping data into a single string element. DXF v2.2: Introduced new data types: DXF v2.2 introduced a new data type to handle date and time information. DXF v2.3: Introduced new data types: DXF v2.3 introduced new data types to allow operators to be dynamically created. DXF v2.4: Introduced new data types: DXF v2.4 introduced new data types to allow operators to be dynamically created. DXF v2.5: Introduced new data types: DXF v2.5 introduced new data a1d647c40b
