A: You can't do this without reflection, and reflection is not the right tool to do it with. As soon as you assign a B to a A, the Java class system breaks down (it is no longer a simple A) and you need to use reflective tools to get the information you need. There is no other way around this problem. This section provides background information related to the present disclosure which is not necessarily prior art. One or more components of a traditional internal combustion engine are mechanically coupled to an output shaft through a drive train. The drive train includes a transmission assembly having a gear train that mechanically couples the components to the output shaft. The gear train usually includes several physically coupled components (e.g., a plurality of drive and driven gears) that are guided by guide rails and/or bearings in a housing. Conventional drive trains used in internal combustion engines are costly to produce, often using multiple components that are coupled to one another.Characterization of the signaling mechanisms regulating viability of murine hematopoietic stem cells. Erythroid, megakaryocytic, and myeloid progenitors survive in long-term cultures of fetal liver and adult bone marrow (BM) when stimulated with cytokines or other chemical agents. However, primitive stem cells do not respond to cytokines in culture. Although it is established that self-renewal and proliferation of myeloid and erythroid cells in colony assays or liquid culture is regulated by a variety of cytokines and growth factors, much less is known about the role of signaling pathways in maintaining viability of primitive stem cells in long-term culture, a surrogate for self-renewal. d0c515b9f4

If somebody has good command of R language, pls share a way to remove the text lines which are in the above format. Basically this is my list of documents, i will process if i have a good way to do this. I tried using grep as $ grep -v Line2.txt filenames.txt it's working if there's a single line but as soon as i run it for files with multiple lines it's not working. A: Run this to remove the lines containing "Line2.txt" and in the result remove " Line2.txt" from the beginning and end

grep -v Line2.txt filenames.txt | sed's/\(Line2.txt\)/\1/g' Example: $ cat line2.txt Line2.txt Line2.txt Line2.txt $ grep -v Line2.txt filenames.txt | sed's/\(Line2.txt\)/\1/g' Line2.txt Line2.txt Line2.txt sed cannot treat the newline as part of the regular expression so the line you are looking for is not matched. To fix it you need to append the newline to the regular expression, like this: $ grep -v Line2.txt filenames.txt | sed's/\(Line2.txt\)/\1 /g' Line2.txt Line2.txt Line2.txt Q: Can't access my VB6 DLL in VS2010 I have a DLL built in VB6, that I'm trying to make available through an MVC2 application (using C#). This MVC2 application is in an assembly in a C# project. When I try to access the DLL in VS2010 I get the following error: Compiler Error Message: BC30002: Assembly referenced 'Common.Properties.Resources' could not be found. Make sure that the declaration is correct and that all referenced assemblies are available. The Application.Designer.vb file is still there and when I look in the "References" window I can see the DLL listed as vb6, even though this file is from a C# project.
