It's kind of like building a house — InDesign is a design program that has a lot of great tools. However, InDesign doesn't have all the features and can't handle as many layers as Photoshop. Many designers prefer InDesign to Photoshop; however, Photoshop makes this job easier. * **FlipBooks:** It's a terrific tool for graphic designers and photographers to create electronic flip books (as discussed in Chapter 13) and other electronic slideshows. FlipBooks is simple to use, while Photoshop is the king of the toolbox when it comes to creating these graphics. * **Illustrator:** It's a great program for a wide variety of graphic design needs, including Web graphics, logos, product design, and other desktop graphics. It's also a terrific program for illustrations such as cartoons and other art. You can create all sorts of nifty effects and special effects with Illustrator. Photoshop can make many, but not all, of these same special effects. * **Keynote:** It's an excellent way to present PowerPoint presentations. Instead of using PowerPoint, most presenters turn to Keynote (an iWork for iPad app) to create a slide show. * **Illustrator:** It's a great program for creating illustrations and graphics. * **Illustrator:** It's a good program for creating illustrations and graphics. * **Illustrator:** It's a great program for creating illustrations and graphics. * **After Effects:** It's a great program for creating animation. * **After Effects:** It's a great program for creating animation. * **After Effects:** It's a great program for creating animation. * **Illustrator:** It's a great program for creating illustrations and graphics. * **Paint Shop Pro:** It's a terrific program for producing print and Web graphics. The Photoshop Layers Panel The Photoshop Layers Panel is the window that appears when you double-click the Layers Panel button (called the “Window” icon) on the top bar of the Photoshop window. Layers are a way of creating depth and complexity in your image. They give you the ability to change the appearance of an object by stacking them on top of each

other. You use the Layers Panel to choose what parts of your image you want to use, which parts you don't want to use, and to apply the effects of a layer to a different part of your image. The Layers Panel's window is divided into four main sections:

Visibility: Layers that are currently hidden or collapsed are faded out in this section. You can set the visibility of any layer by double-clicking on its name. In the Appearance section, you can change the opacity (transparency) of any layer. L a681f4349e
