If you are a beginner or new to Photoshop, don't worry about the 3-D tools. They are too advanced for you right now. The following sections cover the basic, top-level commands in Photoshop. You can find more detailed information about each command from the menus and keyboard shortcuts.

Photoshop Help system While you can certainly find manuals online, Photoshop has a helpful in-program help system and built-in dictionary. To get a popup to show the help system, choose Help⇒Help and then click the Help tab at the top of the Photoshop screen. You see a Help Index with an index at the bottom. To access a menu to a specific topic or dictionary, click the Help menu and choose the Help command on the menu (Ctrl+F1 on the keyboard). You can use the Help system while you work in Photoshop and even print out a manual.

Dictionary The Computer Dictionary at the bottom of the Help Index is an online

reference that you can use to browse most of the items in the menus. It provides definitions for the terms you are used to seeing and gives examples to enhance your understanding of new items. Click the Dictionary tab at the top of the Help Index to access the online dictionary. Tools panel Photoshop has numerous tools that you can use in different ways for different tasks. You can access them from the Tools panel. Figure 1-1 shows the Tools panel. **Figure 1-1:** Photoshop's huge collection of tools and features is on your screen. On the left side of the Tools panel, you have the following:

- Direct selection tools: Select the objects you want to manipulate. These tools use handles or markers to show you the selected region.
- Layers panel: Access the Layers panel to organize and manipulate layers. You can switch between the front and back layers or layer masks. Layers act like windows into the original image. You can manipulate only certain layers, and you can use the Layer Masks to remove or hide parts

of layers. • Favorites panel: This is where you organize your favorite tools for future use. You can customize the panel's location on the Tools panel. • Panels: You can add or remove panels on the toolbar. You can save space on your toolbar by deleting items you don't use. If you need to move the panel, just drag it to a new location on the Tools panel.

Unlimited Digital Access: Only \$0.99 For Your First Month So who do you want taking lead roles in that future? While this jury sounds like a death sentence for a showrunner, I think it is a huge plus for a show if you can get someone like a Leonard or King to do the directing. (Though I wish the two of them both did it. They're fantastic in the roles they have.) Joe Menosky My guess is that they have the right writer in mind. My best guess is Joe Menosky. He's written for The Man in the High Castle, Firefly and Battlestar Galactica. (All great shows, and all shows that I loved. I don't think it's a given, though.) I also think it's worth mentioning that Joe Menosky is also a great writer for comics. He's a particular favorite of my wife, who has been telling me for years that I have to check out both The O.C. and Party of Five. And while I don't think that the show ought to be a mix of The O.C. and Goonies, I

do think that there is a certain looser, playful quality to both that would serve as a good match with the more realistic elements of the show. (I am partial to The O.C. myself, but I think the show can keep both a sense of whimsy and heart.)

Q: boost::asio::buffer and std::vector I am doing a POC of sending and receiving data from a TCP socket using Boost. Asio. I understand the role of the boost::asio::buffer, and it works fine. Here is a sample of the code I am using with boost::asio::stream_protocol::endpoint: boost::asio::stream_protocol::endpoint server_endpoint; boost::asio::stream_protocol::endpoint::bytes_type data(1024); boost::asio::socket_base::bytes_type const body = ...; boost::asio::write(socket, boost::asio::buffer(body)); server_endpoint = server_endpoint.local_endpoint(); boost::asio::async_read_until(socket,

Acute renal allograft rejection: Timely

echographic diagnosis with Doppler ultrasound. The diagnosis of acute renal allograft rejection (AR) is based on clinical, laboratory, and scintigraphic data. Doppler ultrasound (US) has been reported to be beneficial in the diagnosis of AR with a diagnostic performance (true-positive and false-positive findings) comparable to the other methods. The aims of our study were to compare the diagnostic performance and to evaluate the time-dependent progression of Doppler US abnormalities with time of the appearance of clinical, scintigraphic, laboratory, and histopathologic AR in a prospective study of renal transplant patients. Forty patients (32 male and 8 female; mean age, 50 years) with suspected AR were included in the study. All examinations were performed at predetermined time intervals. Twenty-nine patients had acute rejection. The remaining 11 patients had no rejection. The peak Doppler index (peak PI) and resistive index (RI) measured by Doppler US were

significantly increased in patients with AR (P=0.003 and P=0.005). The area under the receiver operating characteristic curve for the peak PI and RI were larger than those for the other clinical, scintigraphic, and laboratory variables. In comparison with renal scintigraphy, Doppler US had better diagnostic performance, with a sensitivity of 97% and a specificity of 78% for both index measurements. The time-dependent changes in Doppler US indexes and variables of rejection severity were not related to the clinical and laboratory data. Doppler US is useful for AR diagnosis in the early period of transplantation and avoids more invasive diagnostic procedures.

Q: Android Support libraries: conflicting classes error I'm trying to implement the share dialog from support library. When I do this: `TextView v = (TextView) v.findViewById(R.id.text); v.setMovementMethod(LinkMovementMethod.getInstance());` It throws an error: Caused by: `java.lang.NoSuchMethodException: android.view.View.[init] [boolean,`
