***** * ** Isoptikon is a drawing application for drawing figures, for example figures of * ** Euclidean Geometry, the Pythagoras theorem, the inference rules...etc. * ** The application is free, can be freely

distributed and includes many tutorials
* ** and other types of material. It is
written using the Qt programming
toolkit, * ** and includes, amongst
others, the libraries: * * - the Math
Library, * * - the OpenGL 1.0/1.1 * *
- GLSL shaders for Opengl. * * -
1.0/1.1 shaders for GLSL. * ****

? Final version (4.0b4) ? English ?
Over 1000 objects and drawings ?
User-defined: triangles, conics,
(isoptics) rays, transformations and
end-points of isoptics ? Fully
customizable colours, shapes and
layouts for figure-types ? User-
defined labelling and symbols ? Photo-
realistic output (de-canvas mode). ?
very high accuracy of all objects and
drawings ? object moving, rotation,
symmetry, mirroring, scale, and
translation ? polygonal/conformal
drawing (multilayer) ? conversion

from of many existing CAD-systems ?
figures of Euclidean Geometry with
many attributes (isoptics, symmetry,
contact-points, approximations,
intersections, lines, distances, etc...). ?
geometry based on CAGD public-
domain figures and objects ? imported
(Delex, UCSF, Nature etc..) images
(rectilinear projections, isoptic and
CAGD based) ? distances in degrees,
radians, angularizes, inverses, radians,
radians, radians, degrees, Cartesian
coordinates. ? isoptic, 2D, 3D,
stratified. ? Contains thousands of
equations ? objects/drawings are even
in 2D! ? vector-based (magnitude,

norm, normal, inverses, vectors) ?
many included special functions ?
internal precision of objects and
drawings ? many figure-types(regular,
conic, line, parabola, ellipse,
hyperbola, convex), line-segments,
multiple-line-segments,... ? many
specialized attributes for objects
(rotation, translation, scaling, different
figures) ? Dynamic figure-types
(Image/Text on top or bottom, or
separated) ? Samples, many images,
tutorials, custom-colours and windows
for changing figures and options.

What's New In Isoptikon?

----- The program is designed to assist the user in the preparation of drawings of simple geometric shapes and geometrical figures, and in the study of isoptic curves and surfaces. Drawings are

generated on a graphics screen and saved as PostScript files. The program is based on input from the mouse, the keyboard or a combination of them.

Drawer Features: -----

The library includes the following components: - Drawing objects - Geometric lines - Drawing programs - Some special objects: - Rectangles - Circles - Ellipses - Polygons - Cylinders - Squares - Hyperspheres - Spheres - Octagons - Cubes - Succubical objects - isoptic programs - Test files - Tutorial programs - A chapter on theory Drawer Features: ----- The library includes

the following components: - Drawing objects - Geometric lines - Drawing programs - Some special objects: - Rectangles - Circles - Ellipses - Polygons - Cylinders - Squares - Hyperspheres - Spheres - Octagons - Cubes - Succubical objects - isoptic programs - Test files - Tutorial programs - A chapter on theory

Functionality: ----- The program has the following functions: - Calculation and plotting of geometric lines - Calculation and plotting of geometric figures - Calculation and plotting of isoptic curves - Calculation of isoptic surfaces - Calculation of

isoptic volumes - Calculation of the volume of a solid body - Calculation of the volume of a tetrahedron - Calculation of the volume of a cube - Calculation of the volume of a parallelepiped - Calculation of the volume of an elliptical cuboid - Calculation of the volume of a sphere - Calculation of the volume of a cylindrical volume - Calculation of the volume of a trapezoidal cuboid - Calculation of the volume of a parallelepipedal cuboid - Calculation of the volume of a triangular cuboid - Calculation of the volume of a cuboid of spheres - Calculation of the volume

of a truncated cuboid - Calculation of
the volume of a body -
